WIRE ROPE LUBRICANTS

INDUSTRIAL PRODUCTS

MOLUB-ALLOY WR 921

Castrol Molub-Alloy™ WR 921 (previously called Molub-Alloy DRL 921) is based on an optimized combination of highly refined paraffinic petroleum oils and synthetic base fluids, thickened with lithium soap and fortified with extreme pressure, anti-wear and lubricating solids. The combination of the proven additive package and base fluids achieves the optimum viscosity, with adhesive compounding minimising waste and fling-off.

Molub-Alloy WR 921 is a solvent free wire rope lubricant developed specially to address the need for a universal dragline product. Film strength additives and solid lubricants protect against wear and fatigue damage in high tension, sharp bend conditions. It provides maximum protection to drag ropes and sheaves even in the worst of operating conditions. The synthetic base fluids used in Molub-Alloy WR 921 have been selected to maintain a tenacious film in hot conditions without compromising cold temperature pumpability or lubricant penetration.

FEATURES & BENEFITS

- Optimum viscosity for universal application.
- Economical – strong adhesion, low consumption.
- Optimum protection for hoist, drag and dump ropes and pins.
- Outstanding protection of sheaves
- Excellent water-resistant characteristics.
- Resists cracking and chipping.
- Stable and tough lubricating film.
- Resists peeling under dusty conditions.
- Protects the inner wire strands of the rope

Pack Size	180KG	Bulk KG
Item Code	3408422	3408423
Barcode	9310084026232	NA
