STEAM RECIPROCATING ENGINE OILS

MAGNA CL 1000

Castrol Magna CL 1000 is formulated from selected base cylinder stocks to achieve the desirable characteristics of high flash point and oxidation stability. It possesses good demulsibility, which means for the lubrication of the cylinders of high speed, totally enclosed steam engines, it does not materially reduce the demulsibility of the crankcase oil.

Castrol Magna CL 1000 is designed for the lubrication of steam engine cylinders and valves. It is also suitable for other purposes, such as the lubrication of heavily loaded slow-moving bearings and gears, and condensing engines using high pressure steam, up to 200psi, and superheat up to 345°C.

Pack size	208L
Item Code	3415085
Barcode	9310084028465

MAGNA CL 460

Castrol Magna CL 460 is a compounded oil suitable for cylinder lubrication in reciprocating compressors dealing with “wet” petroleum gases. Castrol Magna CL 460 is formulated for the cylinders and bearings of older type gas engines. It is blended with fatty (compounded) agents, which provide improved load carrying properties, enabling the oil to be used for other duties, particularly where higher loads occur or where moisture is present.

	MAGNA CL 460
Pack size	205L
Item Code	3413500
Barcode	9310084028786
